

A commitment to improving antibiotic use

We are dedicated to prescribing antibiotics only when needed, and we will avoid prescribing antibiotics when **NOT** needed.

During your visit today, we will:

Answer questions about the role of antibiotics in your treatment

Review common and more serious side effects that may occur while taking antibiotics

Discuss tips on how to relieve your symptoms

Antibiotics **DO NOT** treat viruses that cause respiratory infections such as flu, COVID-19, and respiratory syncytial virus (RSV).

Prescribing antibiotics only when needed helps:

Keep you healthy

Fight antimicrobial resistance

Ensure these life-saving drugs will be available for future generations
