Objectives

- Understand the potential intersections of the three event types:
 - Bloodstream infections (BSI)
 - IV antimicrobial starts (IVAS)
 - Pus, redness swelling (PRS)
- Understand how access types influence risks for infection for each event type
 - Central Venous Catheter (CVC)
 - Arteriovenous (AV) fistula
 - AV graft access
- Understand the magnitude of each event type for 2025 as well as visualize by state
 - BSI-SIR
 - IVAS crude rate
 - PRS crude rate
- Learn where to access similar data for 2019-2023 with 2024 and 2025 updates this summer

Three Event Types

- Bloodstream Infections-(BSI)
- IV Antimicrobial Starts-(IVAS)
- Pus, redness, swelling-(PRS)

Events by Access Type

This table shows the crude rates for each event type - BSI, IVAS, and PRS - by each access type for 2025.

Access types include the following:

- Central Venous Catheter (CVC)
- Arteriovenous (AV) fistula
- AV graft access.
